

Grading Labradoodles – How do you do that?

Tell me, what's a labradoodle... really?

The Australian Labradoodle is a developing breed. It contains a mixture of three parent breeds; Labrador, Poodle and Cocker Spaniel (English and American). The breed has not yet been recognised by national and international kennel associations but together with the Australian Labradoodle Association, accredited breeders are working towards this recognition.

So what's a "multi-gen"?

The multi-generation Australian Labradoodle is that shaggy dog with a gentle but playful nature that people have come to know and love. It comes from several generations of breeding where both parents are an Australian Labradoodle.

In the beginning we might breed an **Origin Labradoodle** (Labrador x Poodle) with a **Spoodle** (Spaniel x Poodle). This produces a **Foundation Labradoodle** puppy, which is graded as ALF1. Jezebel ⇒ is ALF1. We then continue to breed ALF1,2 or 3 Labradoodles together to produce multigenerational Labradoodles until we reach Australian Labradoodle.

Australian Labradoodle Association Grading

Labradoodles are graded based on their **generation** and **parent breed** types. The chart below can help you work out a dog's grading by selecting the grade of one parent from the top brown row and one from the far left column. Offspring grading is noted where these two intersect.
