

## Guide to toxic plants

Many pet owners have come home to find that their carefully nurtured indoor and outdoor gardens have been damaged by their dogs' and cats' curiosity and explorative behaviour. Puppies and kittens love to play with the sticks and leaves of plants, chewing and shredding them all over the garden or the kitchen floor. Older dogs and cats have also been known to dig up newly planted or potted plants and chewing the plastic pot or even the plant's root system. These behaviours annoy and frustrate pet owners, but what effects are the plants having on our animals?

Many people are not aware of how toxic many indoor and outdoor plants, and also cut flower arrangements can be to our beloved pets.

Below are some of the plants and foods that should be kept out of reach from our furry friends as they can present a risk to our animals, causing a range of symptoms from skin irritations to death:

- Aloe vera vomiting, diarrhoea, tremors
- Angels Trumpet all parts of plant are toxic, especially the seeds
- Asparagus Fern Symptoms range due to a wide variety of toxins
- Azalea Paralysis of the muscles, depression of the nervous system
- Baby's breath vomiting, diarrhoea
- Begonia intense burning and irritation of mouth
- Bulbs (e.g. Daffodils, jonquils, tulips, Spider lilies and Crocus) oral irritation, upset stomach, kidney failure, hyperactivity, lethargy, shock
- Buttercup (Ranunculus) Stomach irritation, diarrhoea and convulsions
- Carnations mild gastrointestinal signs, mild skin irritations
- Chrysanthemum rash after contact
- Cycads Leaves and nuts are highly toxic when eaten. Symptoms can be irregular stiffness when walking, liver and tissue damage, and paralysis
- Cyclamen vomiting
- Daffodil vomiting, diarrhoea
- Dumbcane and Elephant's Ear Upset stomach, oral irritation, asphyxiation, tremors, seizures, difficulty balancing

Cyclamen

Dumbcane or Elephants ear

Aloe vera

Azalea

- Gladiola salivation, lethargy
- Ivy Symptoms range due to a wide variety of toxins
- Lantana (berries) Gastro-intestinal irritation, muscular weakness and slow circulation.
- Lilies all parts are quite <u>toxic to cats</u> if eaten. Causes inflammation of the stomach, progresses to acute renal failure and may be fatal if left untreated.
- Milkweed vomiting and weakness leading to kidney and liver failure and death
- Oleander nausea, depression, bloody diarrhoea, weakened and irregular paralysis
- Paspalum Seeds are sticky and can cause irritation, hair matting, and dermatitis
- Poinsettia (leaves and stems) Diarrhoea, abdominal cramping, sap can cause irritation, and blindness if rubbed in eyes.
- Sago Palm/Japanese fern potentially fatal
- Tomato plant diarrhoea, weakness, slow heart rate
- Wandering Jew Dermatitis
- White Cedar (fruit) contractions, difficulty walking, coma
- Wisteria Severe vomiting, abdominal pain and diarrhoea
